

Cross-Commodity Risk Pack

Gas + Carbon -> Power Curve Implications | 18 June 2026

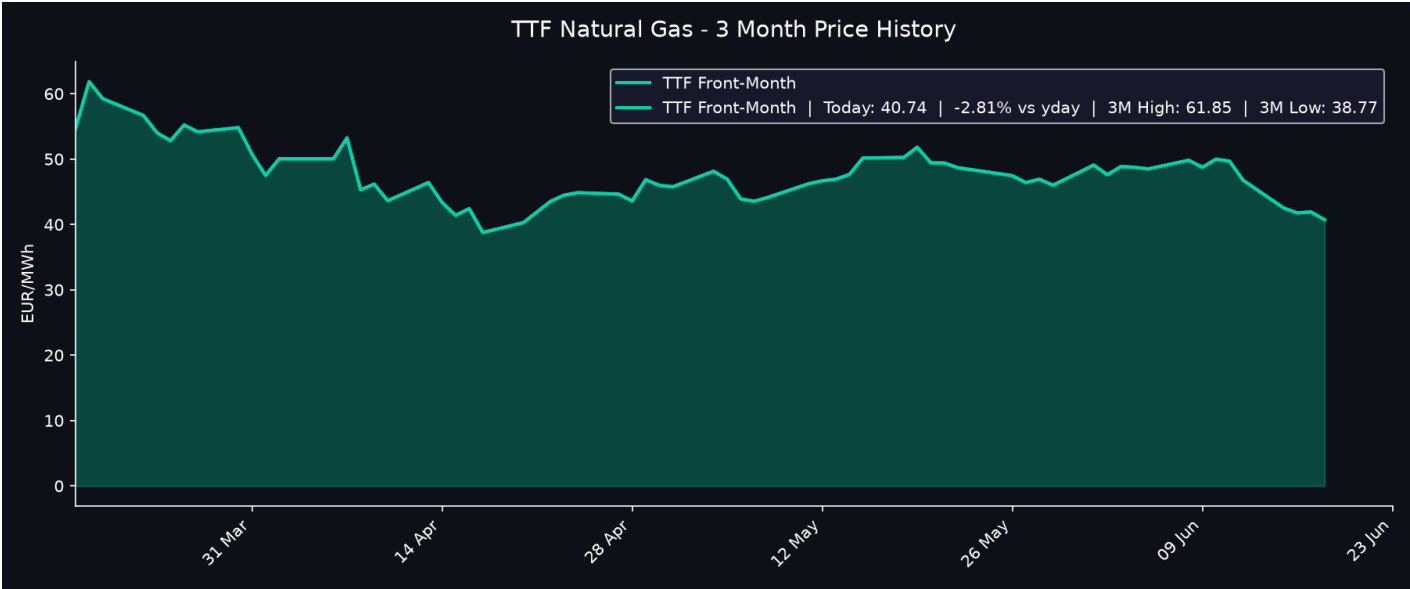

Today's Monitor Metrics

TTF Front-Month	EU Gas Storage Fill	EU ETS Carbon (EUA)	Clean Spark Spread	German Power DA	EU LNG Send-Out
40.74	45.83	75.38	39.82	139.92	3959.9
EUR/MWh	%	EUR/tonne	EUR/MWh	EUR/MWh	GWh/day

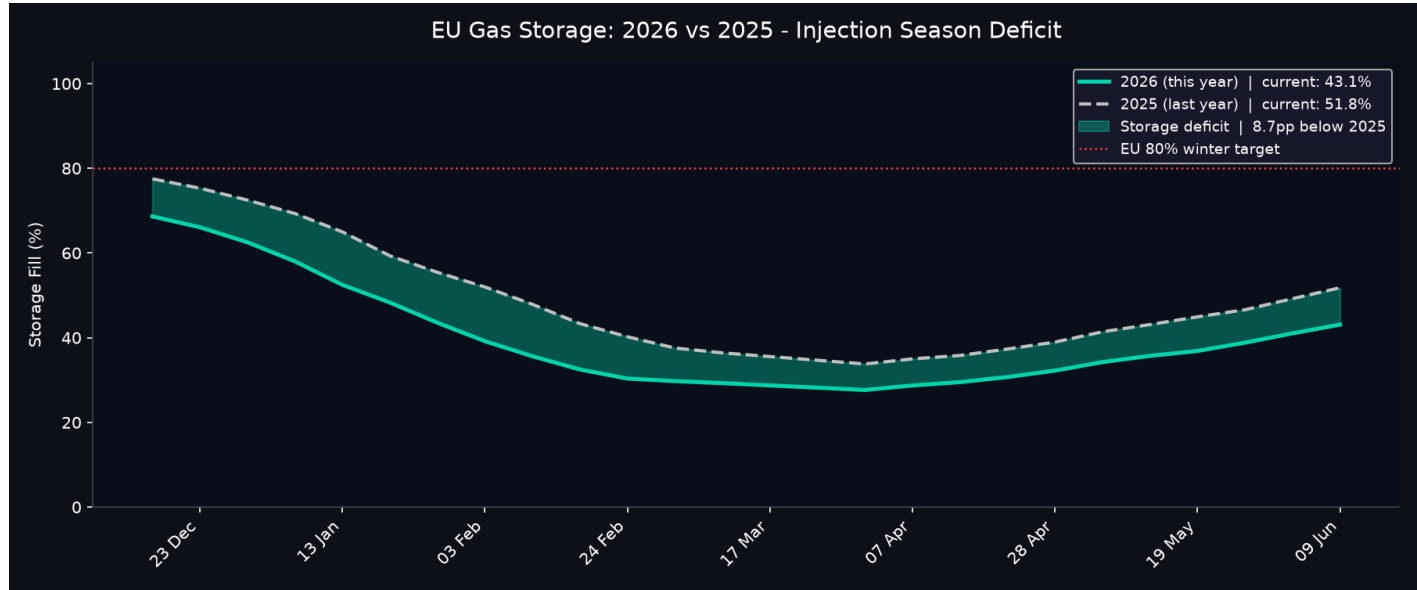

AI-Generated Trading Brief

European gas markets are showing signs of easing tightness, with TTF Front-Month prices at 40.74 EUR/MWh, EU Gas Storage Fill at 45.83%, and EU LNG Send-Out at 3959.9 GWh/day. The recent 6% drop in gas prices following the US-Iran peace deal has alleviated some pressure, but storage levels remain below average. Carbon risk is still a significant factor, with EUA prices at 75.38 EUR/tonne, and the proposed extension of free permits for local investments may impact prices in the coming weeks. The Clean Spark Spread at 39.82 EUR/MWh suggests a relatively narrow margin for gas-fired power generation, which is reflected in the German Power DA price of 139.92 EUR/MWh. Today, we're watching the potential impact of the US-Iran peace deal on gas prices, as well as any updates on the EU carbon market review, which could introduce new risks and opportunities for traders. With gas prices already tumbling, any further positive news could see TTF prices drop further, making it a key risk to watch today.
