

Cross-Commodity Risk Pack

Gas + Carbon -> Power Curve Implications | 18 June 2026

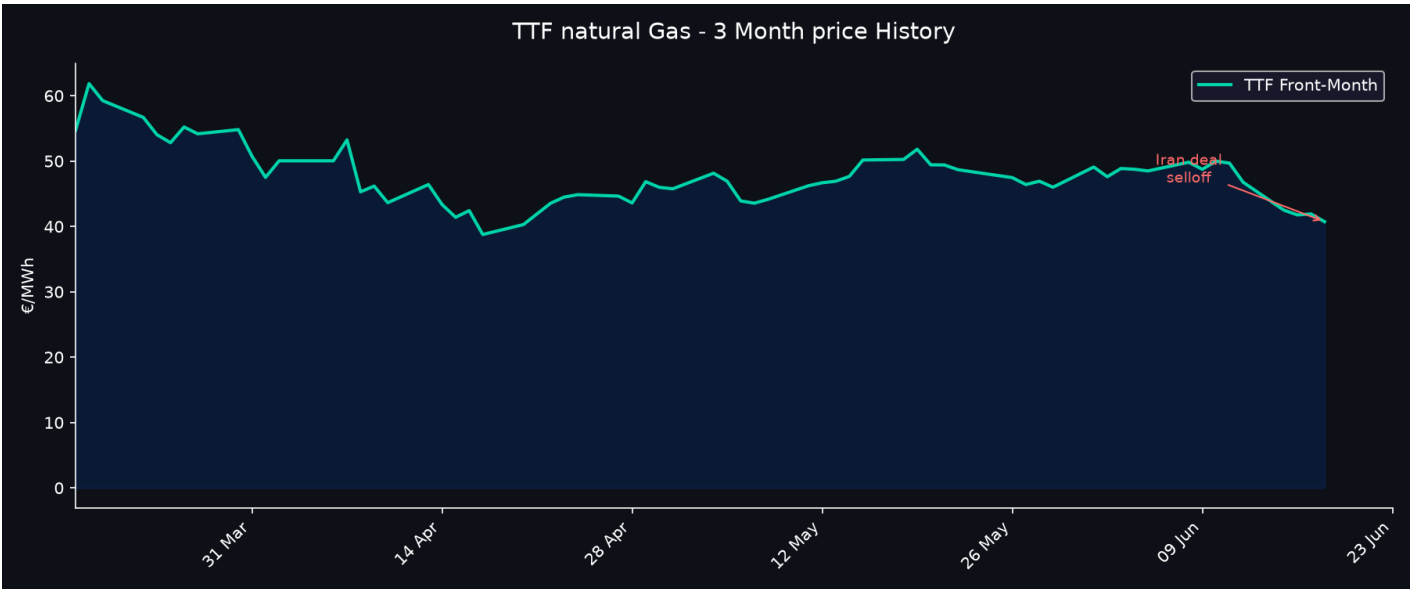

Today's Monitor Metrics

TTF Front-Month	EU Gas Storage Fill	EU ETS Carbon (EUA)	Clean Spark Spread	German Power DA	EU LNG Send-Out
40.74	45.3	75.38	39.82	139.92	N/A
EUR/MWh	%	EUR/tonne	EUR/MWh	EUR/MWh	GWh/day

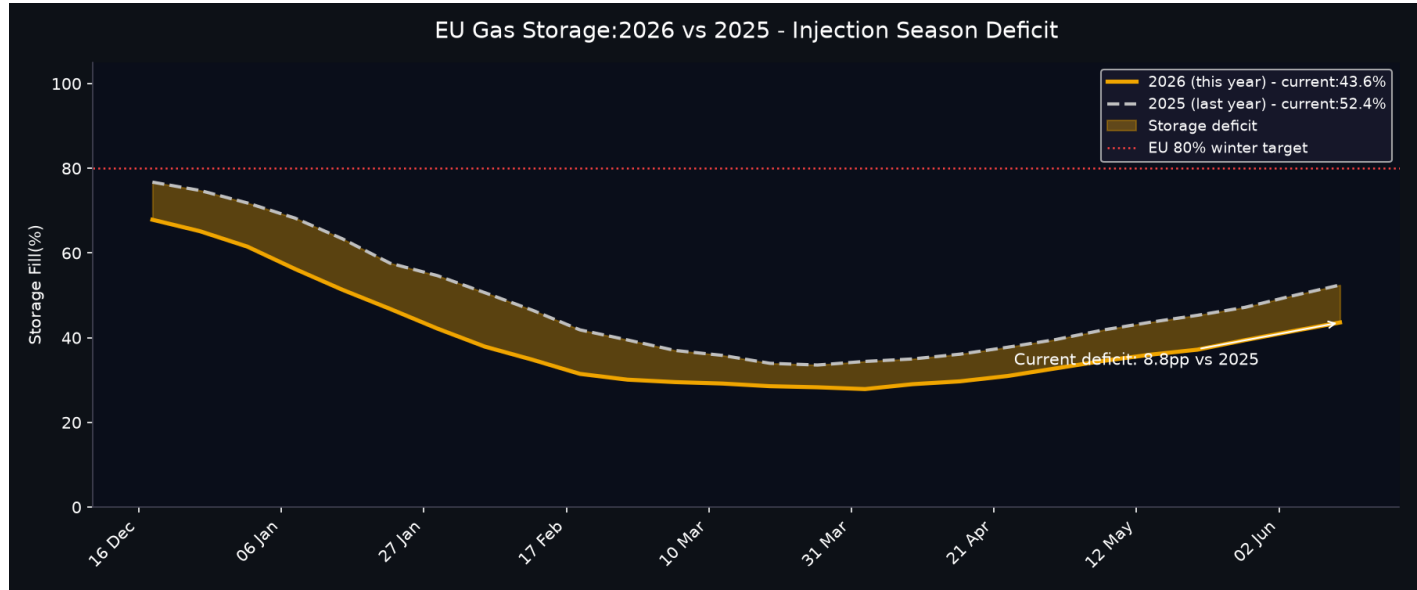

AI-Generated Trading Brief

The gas market is showing signs of tightness, with TTF Front-Month trading at 40.74 EUR/MWh, while EU gas storage fill remains relatively low at 45.3%. The lack of LNG send-out is also contributing to this tightness. On the carbon front, EUA prices are steady at 75.38 EUR/tonne, with the recent proposal to extend free permits for local investments providing some support. The clean spark spread is trading at 39.82 EUR/MWh, indicating a relatively healthy margin for gas-fired power generation, which is reflected in the German Power DA price of 139.92 EUR/MWh. Overall, the power curve is looking supportive for gas-fired generation. Today, the key risk to watch is any update on the Iran situation, as a swift end to the conflict could lead to further downward pressure on gas prices, potentially reversing some of the recent gains. Traders should be cautious of any headlines that could impact market sentiment and adjust their positions accordingly.
