

Cross-Commodity Risk Pack

Gas + Carbon -> Power Curve Implications | 19 June 2026

Today's Monitor Metrics

TTF Front-Month	EU Gas Storage Fill	EU ETS Carbon (EUA)	Clean Spark Spread	German Power DA	EU LNG Send-Out
42.07	45.82	76.14	5.15	108.18	3707.5
EUR/MWh	%	EUR/tonne	EUR/MWh	EUR/MWh	GWh/day

AI-Generated Trading Brief

This morning, the gas market is showing signs of loosening, with TTF Front-Month at 42.07 EUR/MWh, EU Gas Storage Fill at 45.82%, and EU LNG Send-Out at a robust 3707.5 GWh/day. The combination of these metrics suggests that the market is adequately supplied, and any further price drops may be driven by demand rather than supply-side factors.

On the carbon front, EUA prices are holding steady at 76.14 EUR/tonne, with the Top EU Party's proposal to protect industries through carbon market changes a key risk to watch. The recent proposal to extend free permits for local investments also adds to the policy uncertainty.

The power curve is looking bearish, with a Clean Spark Spread of 5.15 EUR/MWh and German Power DA at 108.18 EUR/MWh, suggesting that generators are not incentivized to produce. The key risk to watch today is the potential for further carbon policy announcements, which could impact EUA prices and, in turn, influence the power curve. Overall, the market is poised for a quiet day, but traders should remain vigilant for any policy-driven volatility.
