

Cross-Commodity Risk Pack

Gas + Carbon -> Power Curve Implications | 19 June 2026

Today's Monitor Metrics

TTF Front-Month	EU Gas Storage Fill	EU ETS Carbon (EUA)	Clean Spark Spread	German Power DA	EU LNG Send-Out
41.83	45.56	75.05	5.87	108.18	3959.9
EUR/MWh	%	EUR/tonne	EUR/MWh	EUR/MWh	GWh/day

AI-Generated Trading Brief

The gas market is showing signs of easing tightness, with TTF Front-Month prices at 41.83 EUR/MWh and EU Gas Storage Fill levels at 45.56%, still relatively low but supported by robust LNG send-out of 3959.9 GWh/day. This combination suggests that the market is managing to balance supply and demand, at least for now.

In the carbon space, EUA prices are holding firm at 75.05 EUR/tonne, with the Top EU Party pushing for changes to protect industries, which could lead to increased volatility. The proposed extension of free permits for local investments also adds to the complexity of the carbon market.

The power curve is looking supportive, with a Clean Spark Spread of 5.87 EUR/MWh and German Power DA at 108.18 EUR/MWh, indicating a decent margin for gas-fired power generation. The key risk to watch today is the potential for further developments on the US-Iran peace deal, which could lead to a sharp move in gas prices, given the 6% tumble seen earlier this week. Traders should be prepared for a potentially volatile session.
